

XBOX FOREVER ADS

A platform-native advertising and discovery model for Xbox

EXECUTIVE THESIS

Create new revenue from new modes of play—not by degrading traditional games. Xbox can monetize participation across discovery, competition, culture, and commerce while preserving player trust.

THE OPPORTUNITY

Gaming commands enormous attention, yet most advertising models were designed for other media: they interrupt, redirect, and compete with the player's purpose. Xbox Forever Ads introduces dedicated, platform-native experiences where the economic model belongs—without rebuilding games around advertising.

THE MODEL

PLAYABLE DISCOVERY

Turn sampling into interaction and direct paths to play.

COMPETITIVE SPECTACLE

Create sponsorship around events, rivalry, and shared attention.

LIVE CULTURE

Connect highlights, creators, community activity, and relevant actions.

PLATFORM ADVANTAGE

Xbox already brings together games, players, publishers, creators, identity, commerce, cloud, subscription access, and decades of catalog value.

Value is created around the catalog: back catalog, current, and future titles can participate without conforming to an ad-first design.

PLAYER TRUST

Governing principle: Monetize curiosity, not frustration.

No interruption of traditional gameplay • no coercive placement • no artificial difficulty • no sensitive personal inference • clear safety and privacy boundaries • ads only where the mode supports them.

THE SYSTEM BEHIND IT

Economic and operating layer: relevance • quality • auction logic • safety • delivery • pacing • telemetry • attribution • creator amplification • platform integration. The public proposition is simple; the underlying architecture supports discovery, culture, competition, creators, and commerce at platform scale.

STRATEGIC OUTCOME

PLAY → DISCOVERY → CULTURE → COMMERCE → MORE PLAY

A distinct category of platform-native monetization built around participation rather than interruption—creating new economic surfaces without turning traditional games into advertising products.
